

Drying Locker „KTS 2000“

- SET UP
- PLUG IN
- READY FOR USE

The **KTS 2000** is a two door drying locker and was especially developed for heavy-duty clothing and working-jackets which are difficult to dry. A rotating disc with 18 hooks is fixed to the top surface inside the locker, allowing for easy hanging and removing of the items of clothing. The locker has a depth of 75 cms and has a cylindrical lock. The revolving movement and by blowing warm air into the entire locker at the same time, results in an efficient and gentle process of drying all forms of protective clothing. The built-in time switch enables a selective drying period.

Technical Details:

Electrical supply: 230 Volt V AC/ 50 Hz

Electrical consumption: 1200 Watt

Maintenance-free warm-air blower

Dimensions:

Width/Depth/Height 750/780/2040 (mm)

Weight: app. 130 kg

Standardcolor: RAL 7035 light-grey

Type: sheet steel, powder-coated
