

## OSMA Mobile Cleaning Station

**For 2 or 4 protective suits – disinfecting, washing and drying in one working process**

**HT 304 A**

OSMA Mobile Cleaning Station is made of high quality steel V2A and is suitable for 2 or 4 pieces of protective suits. The self-sucking, washing and disinfecting pump system works in a closed circuit.

The special configuration of washing, disinfecting and drying process enables cleaning and drying of individual protective suits. NEW: all water and air transporting pipes are of V2A quality steel.

The variable swivel arms which are mounted on the base frame, enable you to position individual suits also for outer-cleaning as well.

The looped piping upon which the suits are to be hung are removeable. This enables easy placement of the suits over the piping fixture and also their removal. The danger of accidents is therefore reduced since the use of ladders or chairs is not necessary.
